Safety Information

• Do not bump, apply excessive stress or scratch the lamp, as the lamp is glass product filled with high pressure gas (otherwise it could cause an

• Do not open the lamp housing during lamp operation or until the lamp properly cooled down after the lamp is turned off. He internal pressure of the lamp is especially high when it operation and immediately after it is turned off (otherwise it could cause an injury from lamp breakage)

• Do not operate the lamp in close proximity to paper, cloth or any other combustible material during lamp operation or until the lamp properly cooled down after the lamp is turned off (otherwise it could cause a fire).

• Turn off the power supply to the lamp when installing or removing the lamp to or from equipment (otherwise it could cause an electric shock).

cause an injury from lamp breakage)

Do not look directly or indirectly at the light from the lamp emission (otherwise it could cause skin irritation).

 Do not expose bare skin directly or indirectly to the lamp emission (otherwise it could cause skin irritation).

• Do not touch quartz envelope with bare hands. If quartz envelope is dirty, wipe with alcohol-soaked clean cloth (otherwise it could cause lamp breakage or shorten lamp life).

Do not subject the lamp to vibration or shock (otherwise it could cause lamp breakage or shorten lamp life).

- Do not throw away the original packaging and the protective cover if attached, as they will be needed in transporting or disposing of the lamp.
- Store the lamp in its original protective packaging and the protective cover if attached.
- Transport the lamp In its original protective packaging and the protective cover if attached (otherwise it could cause lamp breakage)
- Before installing the lamp in equipment, make sure that there is no rust, burning or discoloration where electrical connections are made between
- Install the lamp in the correct polarity (otherwise it could cause lamp breakage or shorten lamp life).
- Install the lamp properly in the equipment, without twisting, bending or otherwise applying excessive stress to the lamp (otherwise it could cause lamp breakage, failure of the lamp to remain in place, or shorten lamp life).

Properly attach the lamp lead wire to the terminal, and without applying excessive stress to the lamp(otherwise it could cause overheating or

- Use proper care in installing or removing the lamp to avoid bumping the lamp against anything (otherwise it could cause lamp breakage or damage
- Place the protective cover if attached, on the lamp immediately before or after removal of the lamp.

• Do not use where volatiles are present (otherwise it could cause fire or explosion)

• In the event the lamp ruptures during operation, leave the area and ventilate the area for 30 minutes. There is possibility of inhaling mercury fumes

• After the lamp and lamp housing have cooled down, remove any remaining mercury with a packing tape, a thin paper, or a syringe.

After the lamp and larmp nousing have cooled down, romand any ended to the lamp breakage, mercury could be released. Collect any mercury with a packing tape, a thin paper, or a syringe.

• Place any collected mercury and the materials used for correcting mercury in an airtight nonmetallic container. • If mercury fumes are inhaled, please consult a physician for medical advice.

On disposal, inform the recycler that the lamp contains mercury and is filled with high pressure gas.

Lamp Disposal Information North America Only Hq-LAMP CONTAINS MERCURY Manage in Accord with Disposal Laws See: www.lamprecycle.org or 1-800-895-8842

Specification Sheet

USH-250D

USHIO Super High Pressure UV Lamp

Features & Benefits

- Enhanced electrodes design for precise positioning and high arc stability.
- Improved manufacturing process enables extended life.
- USHIO developed product with tightly controlled ISO quality processes.

Applications

- Fluorescent microscope systems
- Spot UV curing

USHIO

- Light guid applications
- Shlieren method, inspection

USH-250D

Model

USH-250D

Initial Specifications

Wattage Power Range **3	W	250
Operating Voltage **4	V	40±6

**3 Ensure that the lamp is correctly used with proper lamp input. Otherwise lamp performance may vary according to partial mercury evaporation.

*4 As the arc gap increases by electrode evaporation, lamp voltage increases.

Specifications

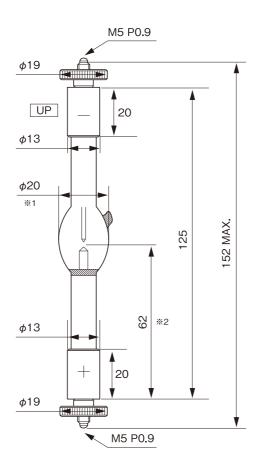

Cold Arc Gap	mm	2
Weight	g	64
Avg Rated Life *5	h	1000

**5 Be sure to replace the lamp at the rated lamp life. Otherwise it could cause an injury if it bursts. Average rated life : represents the average life span when lit continuously at the rated power. The average rated life terminates then either ① or ② takes place. ①When the horizontal irradiance or total luminous flux are reduced to 70% of the initial values. ②When lighting is no longer possible.

Intensity (Representative Values) **6

Horizontal Liminous Intensity (µW/cm²)	360~370nm
(1m from lamp)	104
Total Luminous Flux (Im)	13300

%6 1mW/cm²=1000μW/cm²

- %1 Diameter excludes height of protuberance on lamp bulb.
- %2 Length to the center of the cold arc gap.

Operating Condition *7

☐ Power Supply

Туре	Constant Power Control	
Current Ripple	P-P, %MAX	3
Torigger Voltage **8	Min, kV DC	4
Supply Voltage **9	Min, V	100

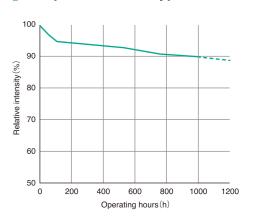

□ Lamp House

Position	0	Vertical ±15
Base Temprature	°C, MAX	200
Bulb Temprature	°C	650~750
Forced Cooling **10	Necessary	
Lamp Current	A, MAX	9

- %7 Use in well-designed and power supply. Otherwise it may cause lamp bursts or shorten life.
- %8 Voltage to ignite lamp. Exhausted lamp needs higher voltage to be ignited
 as electrodes evaporation.
- as electrodes evaporation.

 **9 Open circuit voltage to light the lamp.
- *10 Adjust the cooling to obtain the center of the operating voltage range.

Lamp Life Curve (Typical Value) *11

**11 Horizontal luminous intensity at continuous use. Frequent switch may cause shorter life.

Spectral Distribution *12

\$12 Reference value at horizontal measurement.
