

# Q-MAX | LED Trafo 0-70W

0 - 70W

One for all – the flexible Q-MAX LED transformer. Many Q-MAX LED lamps do not require a transformer, and can easily be integrated into conventional systems with their E14 or E27 retrofit sockets. One single high-quality transformer – the 'Electronic Q-MAX Transformer 0-70W' – is all you need for all transformer-dependent 12 V Q-MAX LED's. The advantage here: as there is no minimum load to adhere to, it adjusts to the appropriate wattage of LED lamps completely automatically. Yet another reason to choose Q-MAX.

Voltage: 220 - 240V AC  
Frequency: 50/60Hz

Input current: 0.29A  
Secondary Voltage: 11.5V

Lamp Wattage: 0-70W  
Life Time: >50,000 h
